

# Develop > Disaster

*Create a controlled and predictable development environment.*

## OUR METHODS ARE PERFECT FOR:

- Application enhancements
- Interfaces & reports
- Conversions
- New applications

## IMPROVE :

- Development cycles times
- Quality of custom code
- Predictability of results
- Consistency of processes

## Deploy the tools you need to ***Stay in control of custom development.***

Ascendive's Project Delivery Platform is a Cloud based services solution that provides a system for custom development work.

Ascendive's **Development Management** system will enable your team to develop custom code quicker and more reliably including:

- Embracing proven methods like Agile/SCRUM if desired
- Identifying features, assigning backlog and running sprints
- Enforcing close client participation to reduce scope risks
- Incorporating collaborative system testing and training
- Tracking time/cost to specific code/functionality for analysis
- Logging incidents and resolutions as code is being developed
- Reviewing progress in burn-down charts and other aids

## What this means for you:

Working on custom code, whether it is new functionality or enhancing existing applications, is a high risk endeavor. Working with clients with limited experience in the process only complicates the matter. Ascendive's Development Management system is designed to define discrete, easily managed components with full client buy-in and visibility. This reduces scope creep, improves system testing and limits risk.

## Why Ascendive?

Ascendive provides a comprehensive suite of professional service production solutions that enable service organizations to harvest their IP, productize it and then reuse their IP as a competitive advantage.
