Deploy the tools you need to *Monitor and Manage Project Finances.*

The most basic form of financial project reporting is profit margin. Too many sub-contractors can distort your margins significantly, as can credits and non-billable hours. So, keeping an eye on the profit margin on a weekly basis is a good starting point for project financial reporting.

You can report on Earned Value in either work effort or \$. Metrics can be at the individual activity level or at the summary activity level.

Instilling this discipline into the project team enables management to spot unfavorable trends early, pin-point the issue, and act.

The Historical Net Present Value chart reviews historical and projected cash flows from your project to determine NPV. By doing this each reporting period, typically months, you get an accurate picture of the value of the project to your organization.

Cash funds available reporting enables you to see the impact of the trade receivables and trade payables for the project. It will help you plan your cash flow, know your point of greatest exposure and help manage risk.
