## Deploy the tools you need to

## *Iron out the kinks.*

Ascendive's Project Delivery Platform is a Cloud based services solution that enables client based collaboration for superior application testing.

Our **Application Testing** solution allows all project contributors to quickly access and execute test scripts enhancing the testing experience by:

- Presenting testers with key-stroke instructions
- Assigning training material to test scripts for assistance
- Providing complete and real-time visibility into testing progress
- Enabling users in remote locations to participate
- Ensuring test failures are correctly work-flowed for rectification
- Linking scripts together to create business case scenario tests
- Displaying visual indicators for testers and team participants

## What this means for you:

You can create a suite of detailed and proven test scripts and continually build upon that Intellectual Property base. Deploy scripts on your projects, improve them and then ensure that the new and improved test scripts are used on all projects going forward.

You can be assured that every aspect of the application solution is tested, collect digital approvals along the way and then have a complete audit trail of every causal factor for failures and the solution.

## Why Ascendive?

Ascendive provides a comprehensive suite of professional service productization solutions that enable service organizations to harvest their IP, productize it, and then reuse their IP as a competitive advantage.
